Background:Coronavirus disease 2019 (COVID-19) has led to a national health care emergency in the United States and exposed resource shortages, particularly of health care providers trained to provide critical or intensive care. This article describes how digital health technologies are being or could be used for COVID-19 mitigation. It then proposes the National Emergency Tele-Critical Care ...

Advanced Digital Health Technologies for COVID-19 and ...

Advanced AI is getting easier to use and more, generally, more available in healthcare. Many advanced AI companies now offer a library of AI models. Just select the model you want to use that applies to the problem you want to solve. As we enter a new decade, transparent AI code and libraries of AI models will become the norm.
Physicians and other health care providers will become discerning customers of a robust health data infrastructure, rather than slaves to a closed-box system. Patients and providers will gravitate toward user interface applications that provide the best functionality and convenience.

**A Robust Health Data Infrastructure**

Most see this as a testament to who we are as a society, and part of the cultural moorings we need to guide us into the future. In general, infrastructure represents a long-term societal investment that will move us along the path of building a more efficient, better functioning, society.

**2050 and the Future of Infrastructure - Futurist Speaker**

Handheld Computers and Portable Diagnostic Equipment – allows for more patient care at bedside and better faster communication between health care providers. Health Care Worker Shortage – shortages of between 10 and 20% are reported for various health care positions.

**The Future of Healthcare | DPR Construction**

By Elizabeth O’Dowd. July 03, 2017 - AMIA launched a new public education plan earlier this month to emphasize the importance of healthcare informatics and the need for HIT infrastructure to support it. The program aims to address the growing demand for knowledge in healthcare as the amount of data available for informatics continues to rise.

**Healthcare Informatics Encourage Advanced HIT Infrastructure**

EHRs, EMRs, personal health record (PHR), medical practice management software (MPM), and many other healthcare data components collectively have the potential to improve the quality, service efficiency, and costs of healthcare along with the reduction of medical errors.

**Big data in healthcare: management, analysis and future ...**

The future of health will likely be driven by digital transformation enabled by radically interoperable data and open, secure platforms. Health is likely to revolve around sustaining well-being rather than responding to illness. Twenty years from now, cancer and diabetes could join polio as defeated diseases.
