TEST PROCEDURE 2A

Ultimate testing for packages weighing 150 lb (68 kg) or less when prepared for shipment.

ISTA 2A - Techstreet

This procedure has been designed to provide a standard set of tests to understand individual package / product performance. Procedure 2A is a standardised test procedure for packaging materials and structures weighing 150 lb (68 kg) or less when prepared for shipment.

ISTA Standard 2 - Medical Package Testing

ISTA Standard 2A - Medical Package Testing

The test sequence of ISTA 2A includes atmospheric preconditioning, which is essentially a soak at ambient room conditions. This involves a controlled temperature and humidity for a specified duration. Most of the test durations are 72 hours.

What is ISTA drop test and how to comply it? - Safe Load...

Procedure ISTA 2A covers testing individual packaged-products weighing 150 lb (68 kg) or less when prepared for shipment. Procedures ISTA 2C includes testing of individual packages of furniture (case goods) for shipment.

Testing Guidelines - International Safe Transit Association

Guidelines for Selecting and Using ISTA® Test Procedures and Projects. The Guidelines are intended to provide insight and information on the protocols, and what factors to consider in selection, use, and results interpretation.

Process Standards - International Safe Transit Association

ISTA Standard 20 is a design and qualification process that provides the structure and path to design, test, verify and validate packaging materials and structures weighing 150 lb (68 kg) or less when prepared for shipment.
